*Monthly cost varies by dose and medication prescribed with free shipping and no monthly subscription fees.

Important: This flyer is for general program information only and does not replace medical advice. A licensed provider will determine whether treatment is appropriate. Medication costs may vary by dose and medication prescribed. This program is not for emergencies; seek immediate care for urgent or life-threatening symptoms.

Frequently Asked Questions

What steps do I have to follow to start treatment?

Our goal is for you to have a comfortable and effective experience tailored to your desired results:

- Complete the intake questionnaire. Your physician will use this information to prepare for your consultation and determine if treatment is right for you.
- Have an asynchronous medical consultation with your physician, who will determine what treatment is needed and write a prescription if appropriate.
- Your prescription will be delivered monthly via mail-order pharmacy to the delivery address of your choice. Your first delivery will take 5-7 days, with recurring overnight shipments. Free shipping included.

Will you keep my information private?

Yes. Only the medical team and prescribers have access to your medical data and order history. Please refer to the program Privacy Policy for additional details.

Do I need an existing prescription?

No. If you meet the criteria for treatment, medical professionals can provide a personal prescription.

What is the cost?

Starting at \$199/month, the monthly cost varies by dose and medication prescribed. Pricing includes an asynchronous medical consultation with your physician, a personalized plan, a monthly prescription for medication, overnight shipping to your home, and email/phone support. If you have an HSA or FSA card with your medical plan, you may be able to pay for prescriptions this way.

How do I take my medication?

Please refer to the instructions included with the medication, as some medications are taken orally and others are taken by injection. Educational videos may be available for GLP-1 injection guidance. If you encounter issues or have questions, consult your physician through the support platform.

Is compounded Semaglutide FDA approved?

When a drug is in shortage, compounders can prepare a compounded version of that drug if they meet certain requirements in the Federal Food, Drug, and Cosmetic Act. You can check for drug shortages on the FDA website.

Pharmacies in the CareValidate network comply strictly with regulatory standards established by state boards of pharmacy, the FDA, the DEA, the USP Convention, and USP General Chapter <795>. Pharmacies in the CareValidate network run quality assurance and quality control checks for every batch of compounded semaglutide prescribed to patients.

Quality steps include, but are not limited to:

- Reviewing and confirming the Active Pharmaceutical Ingredient Certificate of Analysis for semaglutide base lots received from FDA-registered manufacturers.
- Using independent third-party laboratories to test potency, sterility, and endotoxicity of each lot.
- Assigning each compounded lot a unique lot number and Beyond Use Date.

Is this medication safe and is there any reason I should not take it?

The effectiveness and safety of using semaglutide in combination with other weight loss products are not confirmed. Share your full medical history with your healthcare provider, including Type 1 or Type 2 diabetes, thyroid cancer, pancreatitis, kidney disease, diabetic retinopathy, depression, or any history of suicidal thoughts or behaviors.
